

# CubeCart Mod

## Description

This mod handles Cubecart payments through Google Checkout.

The intent is to have Cubecart as the master for all information (e.g. shopping cart, user and shipping info).

Google Checkout is only used as a means of handling the payment of the order.

Only the total amount will be sent to Google Checkout.

The functionality of checkout being the shopping cart and handling customer shipping information is bypassed.

When the customer finalizes the ordering process the Google Checkout payment option is displayed between the other available payment options.

**Payment**

Basket » Address » **Payment** » Complete

Please choose your preferred payment method:

- Bankoverschrijving
- PayPal naar Lingerie d'Or
- GoogleCheckout

Your comments:

**Continue**

When the Customer selects GoogleCheckout and pressed Continue he, or she will be redirected to Google Checkout for the payment.

## Google Checkout

### Review and place order

Order Details - CubeCart testing, [redacted] Test [redacted]

Qty	Item	Price
1	<b>Order number:</b> - Order number: 0611111-000404-1237	\$10.72
	Tax (CA):	\$0.00
	<b>Total:</b>	<b>\$10.72</b>

Keep my email address confidential.  
Google will forward all email from CubeCart testing to [redacted] [Learn more](#)

I want to receive promotional email from CubeCart testing.

Pay with: **AMEX xxx-0005** - [Change](#)

Ship to: **Testte** - [Change](#)

**Place your order now \$10.72**

#### Billing Information & Privacy

Your credit card will be charged by Google. "GOOGLE \* CubeCartTest " will appear by the charge on your credit card statement. To process your order, CubeCart testing will have access to your address and email. [Learn more](#)

#### CubeCart testing Return Policy

As you can see the order id of your shop is added to the payment info.  
After the Customer places the order your shop administration will be updated with the Google Order ID so you have a cross-reference.

**Order Status**  
**Shipping Date:**   
Ship today   
**Modify Status:**  
If status is changed from Pending to Processing you will get the option to send the customer an invoice receipt and grant access to digital products if applicable.  
Processing   
**Staff Comments:**  
(This information is NOT sent to the customer!)  
Google Checkout Order:  
337580856350173  
Google Checkout Comment: Order state change Notification: CHARGED  
**Inform customer:**  
(With this checked the customer is notified of the order status change.)   
**Comments to customer:**  
(This will be added to the default email you wish to inform the customer the order state has changed.)

The order is automatically charged and set to processing, if the Customers account allows.

If you press the “Ship” button at Google checkout site the order status in Cubecart will be changed to completed.

If you have any questions about the functionality, or tips on improving the mod then do not hesitate to contact me at <mailto:Rob@robix.nl>.

## Prerequisites

The modules are tested with version 3.0.10 of CubeCart.

Prerequisites:

- This mod uses the Google Checkout API.
  - libcurl v7.9.0 or later. libcurl is an implementation of CURL, which allows you to send XML over HTTPS using server-to-server HTTP POST requests. Learn more about libcurl at <http://us2.php.net/curl/>.

## FAQ

**Question:** I receive the following error.

We encountered an error trying to access your server at <https://yourserver/store/modules/gateway/GoogleCheckout/ResponseHandler.php>--  
The error we got is:  
sun.security.validator.ValidatorException: PKIX path building failed:  
sun.security.provider.certpath.SunCertPathBuilderException: unable to find valid certification path to requested target

**Answer:** A valid certificate is mandatory for Google Checkout. Self-made ones are not accepted.

You can however test in the sandbox environment with your site without <https://> by using <http://>.

**Question:** Can I have the Google Checkout Logo on my AdWords?

**Answer:** No

Because of the way CubeCart currently works you cannot comply to the rules that Google applies to using Google Checkout with AdWords.

You can use this mod without any trouble to handle your payments but with the restriction of the AdWords.

**Question:** Can I have the Google Checkout and the Google Checkout Express at the same time in my shop?

**Answer:** No

You cannot. Google supports only one callback routine.

**Question:** When do I receive my license key?

**Answer:** You will not receive a key.

Once you ordered the product you can request the key by clicking the link in the Admin portion of the mod in the CubeCart admin module. You fill in the order number and your domain name (without www) and it will show your license key.

**Question:** I get an error saying “4. Error: Malformed URL component: expected id: `(\d{10})|(\d{15})`, but got”. What is wrong?

**Answer:** You have probably filled in a wrong Merchant ID, or Key. Even an extra space will make this error appear. The ID and Key can be found on the Google Checkout seller page see below:
